

VEAFLAME 30

PRODUCT INFORMATION

Flame retardant system based on a blend of inorganic filler, polymeric dyspersant and an intumescent substance

Density	(g /cm ³)	1.44
Inorganics	(%) min.	45

PROPERTIES

- **VEAFLAME 30** is an innovative flame retardant system based on a blend of inorganic fillers able to promote the formation of a dense char on the surface of the burning article. An intumescent material is also blended into working synergically with the filler to increase fire suppression properties.
- **VEAFLAME 30** is suitable to be used together Aluminum trioxide in halogen free formulation.
- **VEAFLAME 30** is also an effective booster for conventional systems based on Sb₂O₃/halogen/Borates

PACKING & STORAGE

20 kg paper bags. At least 1 year in its original package under cool and dry conditions. Keep them away from water and moisture

SAFETY & TOXICITY

For details please refer to our Material Safety Data Sheet
